110 volt: £1,295.00
Prices exclude carriage and VAT

Standard Features

An innovative and practical waste water capture system to prevent run-off and a highly effective spill containment system for many hazardous chemicals, it has a high degree of tolerance of acids, caustics and petrochemicals.

It is a hollow flexible tube, 12.7cm in diameter, placed directly onto a hard surface to encircle the containment area.

The AquaBoom seals itself tightly to the surface to form an impervious liquid barrier. The Aquaboom can be used on any hard surface and takes less than 5 minutes for one person to set up and take down.

Available in 6 or 12 metre length.

Where can AquaBoom be used?

- Outdoor vehicle or equipment washing
- In-plant equipment washing
- Emergency storm water containment
- Boats and ships- to prevent deck run-off
- Marinas- to prevent contamination from run-off
- Parking lot or sidewalk washing- to capture dirty water run-off
- Emergency hazardous liquid spill containment
- Airports- to capture run-off from aircraft washing
