

*Inside this Issue*

Welcome to Morclean's new monthly newsletter, where we aim to bring you our latest news, updates and product innovations. If you would like further information on any of the articles featured in the newsletter, please do not hesitate to contact us on 01246 471147, or via email at [info@morclean.com](mailto:info@morclean.com)

## THE NEW ECOFLEX

A sealed, watertight wash bay bund that replaces the need for traditional concrete wash pads and associated excavation works. Genius. p. 02

## LOW FLOW INNOVATION

Using less than half the water consumption and disposal but with all the power, give a warm welcome to the new ThermoSteam hybrid hot water steam cleaner. p. 02

## ISUZU BIN WASH CONCEPT

The brand-new Isuzu 4x2 bin wash pickup concept will answer the needs of inner-city centres and rural roads, ideal for anyone who prefers not to tow or reverse a trailer, p. 03

## WE'RE EXHIBITING AT THE CLEANING EXPO 2021

...and this time we've lots to show you

We've got so much to shout about this year, including a couple of bin wash innovations that we're working on right now, bringing you more cleaning equipment options than ever before...

CONTINUED ON P. 03

## THE NEW ECOFLEX

by Michelle Reece

A traditional concrete wash pad is more expensive and not always possible to install – where the land is leasehold, for example. The EcoFlex™, on the other hand, requires no groundworks and can be fitted in less than an hour.

The EcoFlex water-tight floor has been further developed by Morclean alongside our [surface mounted wash pad](#) in response to market demand, and where an inflatable temporary solution is not the most effective method.

Unlike a traditional concrete structure, which can take weeks to construct, the wash pad water capture system is installed quickly and with minimal disturbance to the ground.

The [EcoFlex](#) is supplied with a drain to one end of the pad as standard or can be supplied as a complete watertight retaining bund. and water is captured using a 150mm kerbed bund which can be discharged to foul or pumped to a water reclaim system.

## LOW FLOW INNOVATION

by Peter Morley

Our R&D department has recently launched the new ThermaFlow hybrid hot water steam cleaner, a low-flow machine that uses only 7.5 litres of water per minute.

When you compare this to a traditional equivalent jet wash, which would produce between 15 and 21 litres per minute, the ThermaFlow uses half the water consumption or less, and half the disposal, resulting in reduced water for sites where drainage is limited or the reclamation of water is essential.

If a site has no foul drain, the waste water/wash water must be removed by another means as it is illegal to allow water to enter a surface drain, a storm drain, or a soakaway.

“

*A low-flow machine that uses only 7.5 litres of water per minute.*

Here, you have two options. You can either tanker it away, or you can recycle it. Either way, less water will be consumed in the first place as you're using only half the water. Less water means less cost as you need to buy less in, making the ThermaFlow highly energy saving, green and efficient.

# ISUZU BIN WASH CONCEPT

by Peter Morley

The brand-new Isuzu 4x2 binwash pickup concept, with manufacturers warranty, will answer the needs of inner-city centres and rural roads, where tight spaces and small turning circles are an issue for larger bin wash trailers and vehicles.

This Isuzu is ideal for anyone who doesn't like to tow or reverse a trailer, and with a budget price of £30K for the system [which includes the vehicle and bin wash] over 5 years (£154 per month) means that both the machine and pick-up are theirs to keep at the end of the term.

Let us know what you think about our newest innovation [here](#). Our survey only takes a few moments to fill in, and every bit of feedback helps us to help you.

## WE'RE EXHIBITING AT THE CLEANING EXPO 2021

by Michelle Reece

The event, which was rearranged [as a result of the Covid-19 pandemic] for September the 25th, will be held once again at the NAEC at Stoneleigh Park in Warwickshire.

The Cleaning Expo UK show, which is now an established event for the cleaning industry, seeks to connect both suppliers and manufacturers throughout the UK to socialise and network in relaxed and comfortable surroundings.

It's been an exasperating year for businesses, and we need a lift like this to get our minds and enthusiasm racing. An exciting focus for the future, and the opportunity to show our visitors our latest innovations and further improved products.

We can't wait to see you there, to actually be face-to-face with people, and to catch up on all the latest news and innovations from the Cleaning Industry.

We will be bringing you previews of the products that we will be exhibiting at the Expo shortly including the new diesel-driven Custom 8 bin wash, through to our innovative EcoFlex wash pad, so stay tuned on our social platforms for further updates.

Visit [www.cleaningexpo.co.uk](http://www.cleaningexpo.co.uk) to discover more about the show.
